

Complete the concept map and the picture about the excretory system:

Write the odd one out. Explain why.

Heart   Sweat   Faeces   Urine

---

Exhale   Inhale   Intestine   Sweat

---

Oxygen   Kidneys   Intestine   Sweat

---

Urine   Food   Bladder   Urethra

---

Classify the words in the box:

urine pores carbon dioxide faeces kidney exhaling bladder  
rectum anus sweating urethra large intestine

SOLID WASTE	LIQUID WASTE	GASEOUS WASTE

## Complete the sentences with the words in the box:

urethra    rectum    urine    absorbed    bladder  
expelled    faeces    water    solid    blood

- When the undigested food is in the small intestine, it still contains a lot of \_\_\_\_\_.
- In the large intestine, most of the water is \_\_\_\_\_ back into the body. The \_\_\_\_\_ waste that remains forms solid lumps are called \_\_\_\_\_. They pass into the \_\_\_\_\_, where they are stored.
- Finally, the faeces are \_\_\_\_\_ through the anus.
- The kidneys filter the \_\_\_\_\_, removing extra water and waste, forming a liquid called \_\_\_\_\_.
- The urine travels to the \_\_\_\_\_ where it is stored.
- Finally, urine is expelled through the \_\_\_\_\_.
