

## Check

Point A is chosen at random on  $\overline{WZ}$ . Find the probability to the nearest percent that A is not on  $\overline{YZ}$ .

What is the length of  $\overline{WZ}$ ?  $WZ = \underline{\hspace{2cm}}$

What is the length of  $\overline{YZ}$ ?  $YZ = \underline{\hspace{2cm}}$

Probability of A is on  $YZ = \underline{\hspace{2cm}} =$

Probability of A is **not** on  $YZ = 1 - \underline{\hspace{2cm}} = \underline{\hspace{2cm}} =$
