

Light Review

ROY G BIV prism energy less bright white moon
black reflected colors strength sun see absorbed

Light is a form of we can with our eyes. White light is made of many . We use to remember the colors and their order in the spectrum. We can see these colors when light is refracted using a . When light hits an object, some light can be or soaked up by the object. A lemon is yellow because yellow light is back to our eyes. When an object reflects all light, it will appear . When an object absorbs all light, it will appear . Brightness is the intensity or of the light. If I am far away from a light source, it will appear . The is a source of light. The is not a source of light.
