แบบฝึกหัด 1.6.3 Two-Step Equations

จงแสดงวิธีทำ

1. $-1 = \frac{5+x}{6}$

วิธีทำ $-1(\square) = \frac{5+x}{6}(\square)$

$\square = \square + \square$

$\square + \square = \square + \square + \square$

$\square = x$

2. $\frac{v+9}{3} = 8$

วิธีทำ $\frac{v+9}{3}(\square) = 8(\square)$

$\square + \square = \square$

$\square + \square + \square = \square + \square$

$v = \square$

3. $\frac{n+5}{-16} = -1$

วิธีทำ $\frac{n+5}{-16}(\square) = -1(\square)$

$\square + \square = \square$

$\square + \square + \square = \square + \square$

$n = \square$
