

Sea levels are rising, and <sup>1</sup> \_\_\_\_\_ major cities – like New York and London – are in danger. There aren't <sup>2</sup> \_\_\_\_\_ easy answers to this problem, but scientists are looking at <sup>3</sup> \_\_\_\_\_ possibilities. For example, the strange things in the photo are called Lilypad Cities and they float on the surface of the ocean. They're a kind of eco-city. They only use clean energy, so they don't create <sup>4</sup> \_\_\_\_\_ pollution. And there aren't <sup>5</sup> \_\_\_\_\_ cars – in fact, there aren't <sup>6</sup> \_\_\_\_\_ roads. But there are <sup>7</sup> \_\_\_\_\_ footpaths. When the residents want <sup>8</sup> \_\_\_\_\_ exercise, they go for a walk in the artificial mountains. There are certainly <sup>9</sup> \_\_\_\_\_ big advantages to living in a Lilypad City. But sadly, there aren't <sup>10</sup> \_\_\_\_\_ plans to build one yet.
