1. Match the word to its definition.

		•	All the non-living things in a n ecosystem			
Population	1		All the plants and animals in an			
Biotope		ecosystem				
Communit	у	 A group of animals of the same species that live together 				
Biocoenosi	is	•	A group of different species that live in the same ecosystem			
2.	. Say true (T) or false (F)					
	In an ecosystem the non-living things	are not i	mportant.			
A community is a group of animals		s of different species that live together				
	A population of ducks includes many of	different	species of ducks			
The biotope is all the non-living thin		ings in an ecosystem				
	The biocoenosis is all the non-living th	ings in a	n ecosystem			
	Animals of the same species have intr	aspecific	relationships			
3.	. What are trophic relationsh	ips?				
L						

4. Answer A or B

ers				
What is the trophic level of herbivores?				
umers				
How can we show trophic relations between organisms?				
in				
What do we call organisms like fungi and bacteria?				
imers				

5. Name each ecosystem

6. Order this food chain. (write them in the right order)

Falcon	Worm	Grass	Bacteria	Mouse
		0.000	20000110	

7. Read and answer

I. This ecosystem is home to aquatic and terrestrial animals. It has sand dunes and dune grasses. It is found where land meets the sea or the ocean. What ecosystem is this?
2. This ecosystem has aquatic and terrestrial animals. We find birds such as herons here. But this ecosystem has freshwater, not salt water. What ecosystem is this?
3. This ecosystem has many buildings and roads. However, many animals and plants live here too. Many of the plants and animals live in parks. What ecosystem is this?
4. This ecosystem has many tall trees. There's often a river or stream too. This ecosystem is home to many birds and animals that live in trees, such as squirrels. What ecosystem is this?
5. This ecosystem is found in flat, open areas. Grasses are common here, and there are sometimes snakes or rabbits too. What ecosystem is this?
