

# Sum It Up!

When you're done, use the answer key to check and revise your work.

Write the term that matches each photo and caption.

1

Water can be stored for a long time in a large, slow-moving mass of ice.

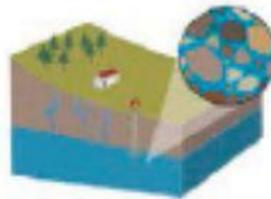

\_\_\_\_\_

2

Water can also be stored underground between the spaces in soil particles or cracks in rocks.

\_\_\_\_\_

3

During heavy rains, some water might not soak into the ground. Instead, it flows down slopes and across Earth's surface.

\_\_\_\_\_

## Summarize

Fill in the missing words to describe the water cycle.

The water cycle shows how water moves from Earth's surface to the 4. \_\_\_\_\_ and back again. The 5. \_\_\_\_\_ provides the energy for the water cycle. Water on the surface of the ocean heats up. During 6. \_\_\_\_\_, it changes from a liquid to a gas. As 7. \_\_\_\_\_ rises into the atmosphere, it cools. During 8. \_\_\_\_\_, it changes from a gas to a liquid. Billions of water droplets form a 9. \_\_\_\_\_. When the droplets get too large for air currents to keep them up, they fall to Earth's surface as 10. \_\_\_\_\_.
