- The diagram illustrates the orbits of the Galilean moons around Jupiter. Jupiter is represented by a large yellow circle at the center. Six concentric circles represent the orbits of the moons. The moons are labeled as follows:

 - Ariel**: The innermost orbit, labeled with a red dot and the name 'Ariel' in a yellow box.
 - mars**: The second orbit from the center, labeled with a red dot and the name 'mars' in a yellow box.
 - deimos**: The third orbit from the center, labeled with a red dot and the name 'deimos' in a yellow box.
 - neptunus**: The fourth orbit from the center, labeled with a red dot and the name 'neptunus' in a yellow box.
 - triton**: The fifth orbit from the center, labeled with a red dot and the name 'triton' in a yellow box.
 - uranus**: The outermost orbit, labeled with a red dot and the name 'uranus' in a yellow box.
