Over the past 600 years, English has grown from a language of few speakers to become the dominant language of international communication. English as we know it today emerged around 1350, after having incorporated many elements of French that were introduced following the Norman invasion of 1066. Until the 1600s, English was, for the most part, spoken only in England and had not extended even as far as two centuries. English began to spread around the globe as a result of exploration, trade (including slave trade), colonization, and missionary work. Thus, small **enclaves** of English speakers became established and grew in various parts of the world. As these communities proliferated, English gradually became the primary language of international business, banking and diplomacy.

Currently, about 80 percent of the information stored on computer systems worldwide is English. Two thirds of the world's science writing is in English, and English is the main language of technology, advertising, media, international airports, and air traffic controllers - Today there are more than 700 million English users in the world, and over half of **these** are nonnative speakers, constituting the largest number of nonnative users than any other language in the world.

Read the passage and mark the correct answer to each of the questions.

One of the most beloved foods in the world, chocolate is not just a modern treat. In fact, chocolate - or rather, cacao seeds - has been part of our **culinary** history for thousands of years.

More than 2,000 years ago in Central America, the Mayan people began consuming a drink made from cacao seeds. There was no sugar in America in those days, and so they flavored the drink with chili peppers and other spices. It was called *xocolatl*, meaning bitter water. The Mayans used *xocolatl* for important rituals, such as religious ceremonies or weddings, and believed that consuming it would enhance their health and cure illnesses. Cacao seeds became highly valued throughout Central America, and were even used as currency by the Aztecs.

On his fourth voyage to America in 1502, the explorer Christopher Columbus landed in what is now called Nicaragua. He was the first European to discover cacao seeds being used as money, but he did not consider it very significant. It was only later, in the 16th century, that another explorer, Hernando Cortez, saw cacao’s value, and brought the drink and the equipment used to make it back to Spain. The Spanish didn’t quite **take to** the bitter taste, and added other ingredients such as sugar and vanilla, so that chocolate more closely resembled the sweet treat we know today.

As popular as chocolate was in Spain, it didn’t spread to the rest of Europe until nearly a hundred years later, when a Spanish princess married the French king and made chocolate fashionable. By the 17th century, the chocolate drink had gained widespread popularity in France, and an ambitious Frenchman opened the first chocolate house in London. Soon, chocolate drinks were sold everywhere in London, and English bakers began using it in cakes - the first mention of chocolate being eaten and not drunk.

But the biggest development in modern chocolate consumption happened by accident in 1828. C. J. van Houten, a Dutch chemist, discovered a method for making powdered chocolate when he tried to extract oils from cacao to make the drink smoother. This product became known as “cocoa powder.” Not long after, in 1847, a British man named Joseph Fry developed “eating chocolate,” which were chocolate bars made of cocoa powder, cocoa butter, and sugar. This led to the first milk chocolate bars, sold by Nestle, a Swiss company. These were created by adding condensed milk to Fry’s chocolate bar recipe. Fry’s company, Fry & Sons, was later bought by Cadbury. Today, Nestle and Cadbury remain the world’s leading chocolate producers.
