

## Reflection Symmetry

**Reflection Symmetry** (sometimes called *Line Symmetry* or *Mirror Symmetry*) is easy to see, because one half is the reflection of the other half.

We show symmetry with a line that is called the **line of symmetry**.

The Line of Symmetry (also called the **Mirror Line**) can be in **any direction**.

The line of symmetry can be **horizontal** **vertical** **diagonal**.

A shape can have no lines of symmetry.

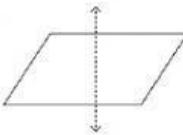

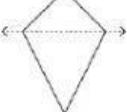

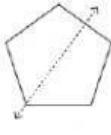

A shape can have one line of symmetry

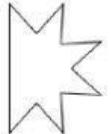

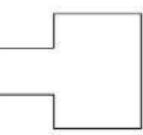

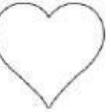

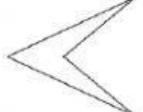

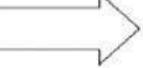

A shape can have two or more than one line of symmetry

Look at the shapes below. Is the line a **line of symmetry**? Answer Yes or No

How many lines of symmetry do the shapes below have?

1)		2)
