

CELLS. PARTS AND FUNCTIONS

Watch this video:

1. Name the parts of the cell.

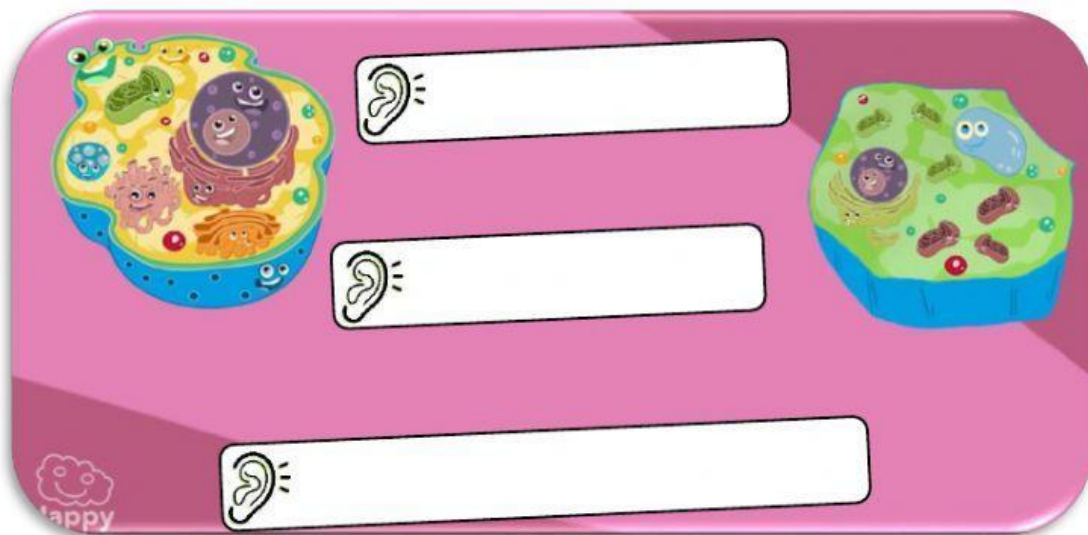

2. Complete:

membrane - cytoplasm - nucleus - organs

- The is a liquid substance between the membrane and the nucleus where you can find the organelles (organs).
- The protects the cell from the light, the temperature... and allows nutrition: it facilitates nutrients to enter and waste substances to exit.
- The is the most important organelle.
- There are different types of with different functions.

3. Cells carry out the three vital functions. Listen and write.

well done!
