

The Seasons

Trinidad and Tobago has a **tropical climate**. It has two seasons: the **dry season** begins in January and ends in May and the **wet season** begins in June and ends in December.

During the dry season, there are many bush fires. On the other hand, during the wet season there are many floods. The wet season is when farmers **plant** their crops and they can grow. The dry season is when farmers **reap** or **harvest** crops.

The seasons are important to our daily life in Trinidad and Tobago because it allows just enough rain and sunshine for people to live without fear of thirst and hunger.

Answer the following questions based on the passage above.

1. What type of climate does Trinidad and Tobago have?

2. When does the dry season start?

3. Which is the better season for reaping crops?

4. Why are the seasons important to us?
