Instructions: Listen, read, and match.

Biomes of the Earth

Biomes are **natural communities** of plants and animals.
The earth has six biomes.

The oceans are the biggest biome on Earth and are home to whales, dolphins, and fish. Over seventy percent (70%) of the earth is ocean. Oceans give us food and oxygen. Ocean water goes into the air and comes back as rain.

Lakes and rivers are **freshwater**. Turtles and ducks live in this biome. About three percent (3%) of the earth's water is freshwater.

About thirty percent (30%) of the land on Earth is **desert**. Deserts are the driest and hottest biome. Deserts are home to snakes and lizards.

Over thirty percent (30%) of the land on Earth is **forest**. This biome has many trees, plants, and animals. There are forests in hot and cold places. Forests are the biggest biome on land.

Grasslands have grass, but not many trees. North American grasslands are home to rabbits and snakes. African grasslands have zebras, elephants, and lions.

The **tundra** is the coldest biome. It is home to foxes, bears, and seventeen hundred kinds of plants.

Instructions: Listen, read the text again and answer.

- 1.- Which is the biggest Biome on Earth?
- 2.-What do oceans provide us with?
- 3.- What's the average of freshwater on Earth?
- 4.- Which is the driest and hottest Biome?
- 5.- What's the average of Forest on Earth?
- 6.- Where can we find elephants, zebras, and lions?
- 7.- Which is the coldest Biome on Earth?

Instructions: Scan the text and complete the chart.

	Ocean	Freshwater	Desert	Forest	Grassland	Tundra
1. Coldest						X
2. Driest						
3. Biggest						
4. Biggest on land						
5. Three percent of the earth's water						
6. Doesn't have many trees
