

Asexual reproduction

1. Write the name of the plant parts used in asexual reproduction.
Then, match the descriptions.

bulbs

rhizomes

stolons

tubers

1. These are specialised stems that grow horizontally underground.

2. These are underground stems that develop small buds or 'eyes'.

3. These are specialised stems that grow horizontally above the ground.

4. These are underground stems with leaves that store food. Roots grow from the bottom of the bulb.
