

Topic 9

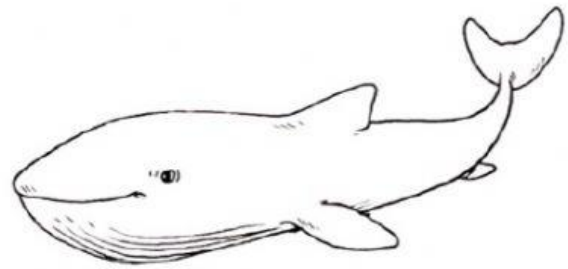

Plants and Animals

(I) Comprehension

C Read the passage. Answer with "True" or "False".

Blue whales are the largest animals on earth. They measure up to 100 feet long and weigh up to 200 tons. Their tongues alone can weigh as much as an elephant and their hearts, as much as a car!

Blue whales reach this magnificent size by eating tiny shrimp-like animals called krill. An adult blue whale eats about 4 tons of krill a day.

Blue whales are among the loudest animals on the planet. They produce a series of pulses, groans and moans. In good condition, blue whales can hear each other up to 1,000 miles away. Scientists think they use these sounds not only to communicate but also to locate food.

It is estimated that there are about 10,000 to 14,000 blue whales worldwide. They were over hunted for many years since their meat, fat and other body parts are very valuable.

1 An adult blue whale weighs as much as an elephant.

2 Blue whales mostly feed on tiny fish and planktons.

3 A blue whale can hear another blue whale from as far as 1,000 miles away.

4 Blue whales use sounds to communicate and to find food.

5 There are about 20,000 blue whales around the world today.

6 Blue whales are hunted for their meat and fat.
