urinary

1. This system is composed of your muscles, which enable your body to move.
2. This system is in charge of creating babies in order to keep the human species going.
3. This system is made up of organs called glands, which produce hormones that control the way your body works, changes, and grows.
4. This system is made up of your bones, which serve as your body's framework and protect your most important organs.
5. This system gives your body the tools it needs to kill germs and fight contagious diseases.
6. This system has two main parts: the central, which includes your brain and your spinal cord, and the peripheral, which is made up of the nerves all over your body.
7. This system is in charge of taking food in, breaking it down, and absorbing from it the nutrients that your body needs to survive.
8. This system includes your lungs and airways, which are responsible for taking in the oxygen your body needs.
9. This system is in charge of cleaning your blood and getting rid of waste through your urine. It includes your kidneys, ureters, bladder, and urethra.
10. This system is made up of your heart and blood vessels, which are in charge of delivering food and oxygen to every part of your body.
