3.- Reading. Answer the questions. (0,25 each one).

READING SECTION.

A natural disaster is a major catastrophic event caused by natural processes of the Earth.

The strongest earthquake in the country that has been measured was on December 12, 1979. It happened in the Pacific Ocean on the border between Ecuador and Colombia and measured 8.2 on the Richter scale.

It caused a tsunami, which is another type of natural disaster. It is a long high wave that can cause a lot of destruction. Some of the most famous volcanoes of these are the Cotopaxi, Reventador, Cayambe, and Tungurahua. Volcanoes can be erupting, active, dormant (not active but may be in the future), or extinct (has not erupted in over 10,000 years).

a measurement of  
earthquake magnitude,  
based on seismic wave size

Richter scale

© 1996 by the USGS

a) Where was the strongest earthquake in Ecuador?

b) What is a tsunami?

c) What is Natural Disaster?

d) What is a Richter scale?

4.- How can we avoid a climate disaster? Listen, look at the picture and write. (0,25 each one).
