## Mathematics

### Ration & Equal Ratio

#### Ratios

A ratio is a comparison between the quantities of two things.

*Example:*

There are 3 triangles and 2 squares.

We can write the ratio as

3 : 2 or 3 to 2 or  $\frac{3}{2}$

A. Write each ratio in three ways. Do not simplify fractions.

boys to girls

:  or  to  or  $\frac{\text{input}}{\text{input}}$

apples to bananas

:  or  to  or  $\frac{\text{input}}{\text{input}}$

**Circles and Squares**

:  or  to  or  $\frac{\text{input}}{\text{input}}$

Dogs to cats

:  or  to  or  $\frac{\text{input}}{\text{input}}$

B. Write each ratio in fraction form. Do not simplify.

i.  $8 : 5 = \frac{\text{input}}{\text{input}}$

iii.  $2 : 18 = \frac{\text{input}}{\text{input}}$

ii.  $17 \text{ to } 34 = \frac{\text{input}}{\text{input}}$

iv.  $7 \text{ to } 12 = \frac{\text{input}}{\text{input}}$

C. Write each ratio in its simplest form.

i.  $10 : 6 = \square : \square$

iii.  $3 : 9 = \square : \square$

ii.  $12 \text{ to } 30 = \square \text{ to } \square$

iv.  $15 \text{ to } 45 = \square \text{ to } \square$

D. Use cross multiplication to identify each equal ratio. Write YES or NO.

i.  $\frac{5}{7} = \frac{35}{42}$  \_\_\_\_\_

iii.  $\frac{4}{5} = \frac{16}{20}$  \_\_\_\_\_

ii.  $\frac{25}{20} = \frac{10}{8}$  \_\_\_\_\_

iv.  $\frac{7}{8} = \frac{14}{6}$  \_\_\_\_\_

E. Write the missing number in each proportion.

i.  $\frac{n}{56} = \frac{3}{7}$   $n =$  \_\_\_\_\_

iv.  $\frac{12}{32} = \frac{n}{8}$   $n =$  \_\_\_\_\_

ii.  $\frac{16}{n} = \frac{2}{5}$   $n =$  \_\_\_\_\_

v.  $\frac{10}{15} = \frac{2}{n}$   $n =$  \_\_\_\_\_

iii.  $\frac{9}{4} = \frac{n}{8}$   $n =$  \_\_\_\_\_

vi.  $\frac{2}{5} = \frac{n}{25}$   $n =$  \_\_\_\_\_
