

Chemical Reaction of alkenes (Types of reaction: **Electrophilic addition reaction**)

Markovnikov's rule: In addition reaction of unsymmetrical alkene to the **HX**, H will be added to the C of the C=C that has **more H** attached to it.

Tutorial Q9:

b) Reaction of 2-methyl-2-heptene with HCl.

c) Reaction of 2-methylbut-2-ene with HCl.

a) Reaction of 2-methyl-2-butene with HBr in the presence of peroxide.

Due to presence of peroxide:

Anti-Markovnikov's rule: In addition reaction of unsymmetrical alkene to the HX, H will be added to the C of the C=C that has LESS H attached to it.

Common peroxides:

Answer :
