

Types of reaction: **Electrophilic addition reaction**

Name of reaction: **Hydration**

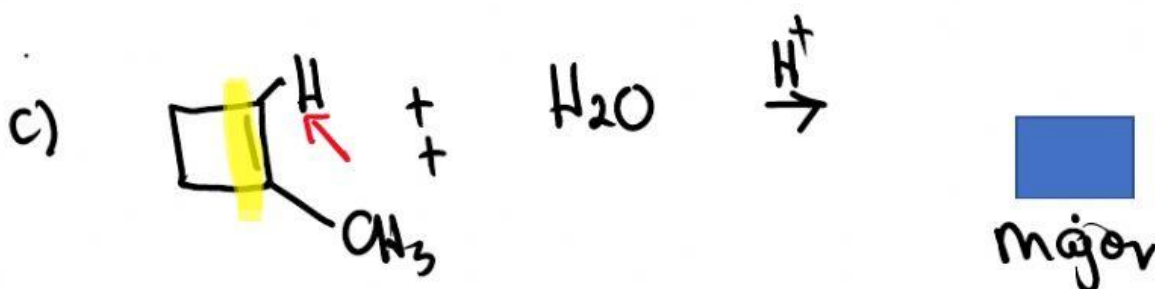

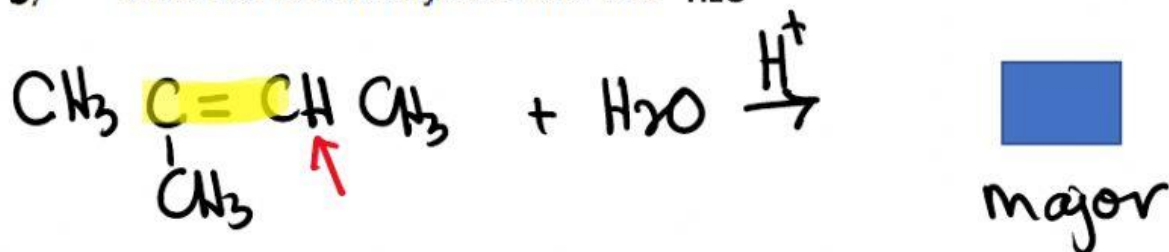

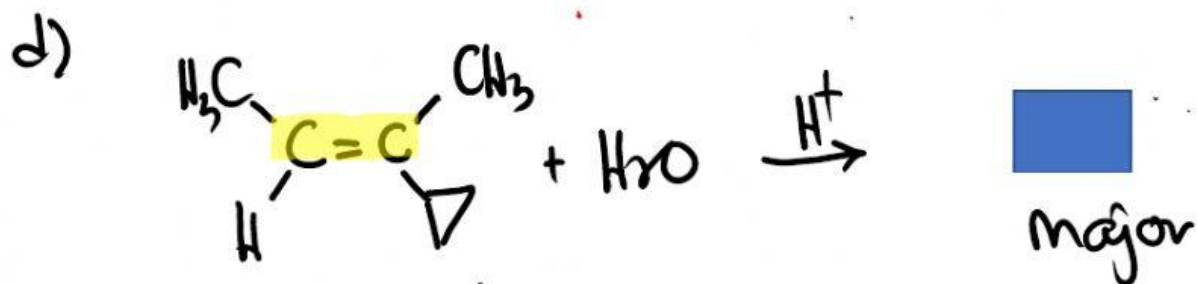

Additional Exercise:

a) Reaction of 2-methyl-2-heptene with H_2O

b) Reaction of 2-methylbut-2-ene with H_2O

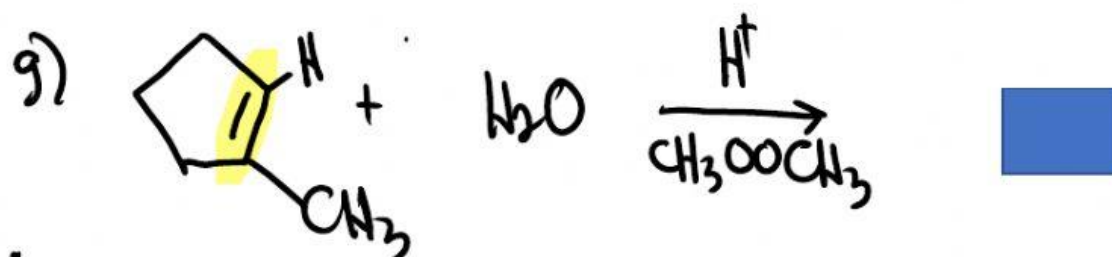

Due to presence of peroxide:

Anti-Markovnikov's rule: In addition reaction of unsymmetrical alkene to the HX, H will be added to the C of the C=C that has LESS H attached to it.

Common peroxides:

Answer:
