

Name: _____

Date: _____

Nisa went to library during her English lesson. She found a book that was about frogs in Borneo. These were the frogs that she liked reading about the most.

Lesser Rock Frog

Physical Characteristics: The lesser rock frog is a small frog. A male can grow up 30mm long.

A female can grow up to 55mm long. This frog has long legs with webbed feet. Its green and brown colour helps it to camouflage with rocks and hide from danger when it is perching on rocks. It breathes through its skin, not through its mouth.

Habitat: This frog lives in rocky rainforest streams and waterfalls.

Diet: The lesser rock frog eats insects like crickets.

Behaviour: This frog lifts its back leg and waves when it wants to talk to its friends. It lays its eggs in streams. The lesser rock frog rests during the day and looks for food at night.

Dangers: The lesser rock frog is an endangered frog. There are only a small number of these frogs living in Borneo. When people throw rubbish into rivers and streams, they become polluted. The lesser rock frogs might get sick. We must look after their habitat.

Fill in the blanks with the correct answer given in the box below.

crickets	grow	endangered	camouflage	danger
long	polluted	rocky	small	streams

The lesser rock frog is a _____ frog. It's male can _____ up to 30mm long while the female can grow up to 50mm _____. The lesser rock frogs has green and brown color body that can help it to _____ with rocks. It can hide from _____.
