COMPREHENSION TERM TEST STD 3

Read the passage below and answer the questions about what you have read.

Cuttings are pieces of stem, root, or leaf of plants. They are about 30 centimetres long. They are taken from mature trees. They are collected in the early morning. The lower leaves of a cutting are removed, and the upper leaves are cut in half. When they are about to be planted, the ends are dipped in Rooting Hormone-a chemical which encourages faster root development. The cuttings are also placed in a Propagator or Propagating Bin. Examples of plants grown by this method are cassava, hibiscus, croton, sugarcane (stem) and bread fruit (root).

1) What are cuttings?

_____ *1mk*

2) When are cuttings taken from a plant?

a. at night ***b. at mid-day*** ***c. at mornings*** ***d. when it is raining*** *1mk*

3) Why is the cutting dipped in Rooting Hormone?

_____ *2mks*
