V. Read and do the tasks

Is that a butterfly or a flower? Is that a lizard or a log?

Many animals and plants blend in with their surroundings, helping them to survive. Animals use their colour to hide among rocks, grass, and trees.

This is called **camouflage**.

Camouflage helps animals hide from their predators. It also helps predators such as lions and tigers sneak up on their prey without being spotted. Animals such as chameleons change their colour to match the colour of their surroundings. Spindly stick insects are very difficult to see among branches and twigs because of their colour and shape. Arctic hares are brown during the summer to blend in with their surroundings of soil and shrubs. They shed their fur in autumn and grow new white coats to blend in with the snow during the winter months. Tigers use their stripes as camouflage to blend in with the light and dark grasses. African lions use their tan colour to hide in the savannah grasses. This allows the lion to creep up on its prey without being seen.
