C. READING:

I. Read the passage below and choose the best answer A, B, C or D to each question.

Space travel is hard on people's bodies. Spending long amounts of time in space makes bones and muscles weak. It is hard to eat in space. It is hard to sleep and take showers. Scientists use space stations to study how people can live and work in space. Space stations orbit around the earth. The Soviets sent up several space stations. The first, Salyut 1, was launched in 1971. The first US space station, Skylab, was launched in 1973. The most famous Soviet space station was Mir, which orbited Earth from 1986 to 2001. Astronauts from many countries visited Mir. Many of them performed experiments on the space station. They learned many things about living and working in space.

In the late 1990s, many nations worked together to build an International Space Station. The space shuttle carried parts of the station into space. Astronauts put the pieces together. The International Space Station was scheduled to be completed by 2006. The goal is to have people living and working in the space station all the time. Someday, maybe everyone who wants to will be able to travel into space.

- C. 26. People's bodies
 A. cannot stand up for the hardship of space travel
 B. get weak when people spend a long time in space
 C. get dirty easily in space. D. A and B
