

The Plant Cell.

Drag the correct words below
to match the organelles of the
plant cell in the picture.

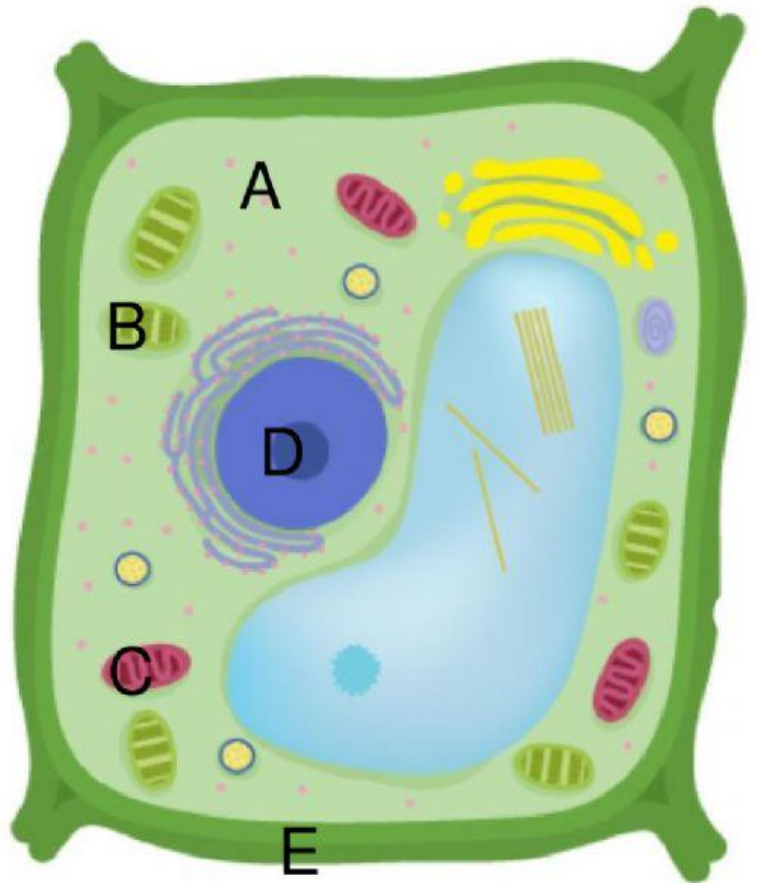

mitochondria

nucleus

chloroplast

cytoplasm

cell wall

Match the cell organelles to the correct function it performs inside of the plant cell.

- 1. nucleus
- 2. mitochondria
- 3. chloroplast
- 4. cytoplasm
- 5. cell wall

An organelle in plant cells where photosynthesis happens.	
A strong structure that surrounds a plant cell.	
Organelles that take in nutrients, break them down, and give the cell energy.	
A large organelle located near the centre of the cell. It works as the cell control centre.	
The fluid that contains the cell organelles.
