Physical Brain Changes

The benefits of music for academic learning are well documented, thanks to research following young people's progress as **they** learn an instrument. Evidence is also increasing that studying music leads to actual physical changes in one's brain development. Significantly, learning and playing music alter the amount of activity in certain regions of the brain, as well as the structure of specific areas.

One study at the University of Munster in Germany monitored the brain activity of two groups of people between 20 and 30 years of age. One group consisted of 20 musicians who had played music for at least 15 years. The other group consisted of 13 non-musicians. Each participant listened to a recording of piano music as the researchers watched **their** brain responses. While listening to the recording, the musicians showed 25% more activity in the area of the brain that processes auditory signals. Although the music was from a piano, the response level was higher for all musicians, whether **they** played the piano, violin, or another instrument.

A separate study at McMaster University in Canada followed the progress of 12 children for a year. Six of the children were taught music using the Suzuki method, a popular teaching method from Japan. The other six did not learn an instrument. Over the course of the study, the researchers took regular measurements of certain brain regions. **They** found that the music students had increased activity in the region of the brain responsible for focusing attention and making sense of different sounds.

A) Are the following statements TRUE OR FALSE according to the text? (10)

- | | |
|--|-------|
| 1. Learning and playing music change the structures of specific brain areas. | T / F |
| 2. All the students participated in the study at Munster University were experienced in music. | T / F |
| 3. In the German study, brain activity was measured as people listened to music. | T / F |
| 4. The McMaster study was conducted over a 12-month period. | T / F |
| 5. The study involving the Suzuki method took place in Japan. | T / F |

B) What do the following words refer to in the text? (4)

1. "**they**" paragraph 1: _____
2. "**their**" paragraph 2: _____
3. "**they**" paragraph 2: _____
4. "**They**" paragraph 3: _____

C) Ask questions about each of these sentences from the text: (10)

1. **20 musicians** had played music for at least 15 years."
2.
 - a. WHO _____?
 - 20 musicians had played **music** for at least 15 years."
 - b. WHAT _____?

3. "last year, the researchers took regular measurements of certain brain regions."
- a. WHEN _____ ?
"last year, the researchers took regular measurements of certain brain regions."
- b. WHAT _____ ?
- c. "last year, the researchers took regular measurements of certain brain regions because they want to study it."
- d. WHY _____ ?

2) Complete the following sentences with the Present Simple/ Present Continuous/ Simple Past/ Past Continuous/ Present Perfect / Future tenses. (20 P 2E)

- 1- Sue wants to lose weight, so this week she _____ (eat) chocolate cookies.
- 2- Every year things are more expensive. The cost of living _____ (rise).
