

OWL FACTS!

LET'S LEARN ABOUT THIS TYPE OF BIRD.

- Many owls are **NOCTURNAL**, that means that they sleep in the day and come out at night. Some others are **DIURNAL**, so they hunt in the day and sleep at night.
- Owls can't move their eyes, but they can **TURN THEIR HEADS** almost completely to see around them. Can you do that?
- They have a **FLAT FACE** and very **BIG EYES**, which help to see prey from far away at night.
- They live in trees or in the ground. They don't make their nests, they lay eggs in other birds' nests or in tree holes.
- A young baby owl is called an **OWLET**.
- They are famous for their "**Hooting**" sound. Hoot! Hoot!
- They eat all type of smaller animals. They like hunting hares, lizards, frogs, mosquitos and parrots.
