

EXAMPLE: There are 4 small fish swimming. There are 6 big fish swimming. How many more big fish are there swimming?

$$6 - 4 = 2$$

There are 2 more big fish swimming.

- ① 7 ducks are walking. 3 ducks went in the water.
How many ducks did not go in the water?

$$7 - 3 = \underline{\quad}$$

 ducks did not go in the water

- ② 5 crabs are on the sand. 2 crabs are in the water.
How many more crabs are on the sand?

$$5 - 2 = \underline{\quad}$$

There are more crabs in the sand
