

First, write the number of the image in the appropriate description box. Then choose the correct name of the drug administration route:

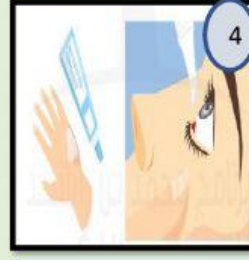

1

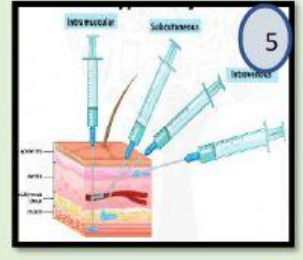

2

3

4

5

It is where the patient takes medication through the mouth. Drugs taken orally are normally pills or capsules.

It is when the drug is administered somewhere out the intestines, most commonly through injections.

The drug is placed (put) under the tongue. It will dissolve and absorb into the blood through the tissue under the tongue.

The drug is administered in the form of a cream or gel applied directly to the area that needs treatment.

The drug is placed (put) between the gum and cheek. Here it will be dissolved and absorbed into the blood
