- c.the happiest

5. What is _____ phone on the market?

- a.the thinnest
- b.thinnest
- c.the most thin

7. Read the text and answer the questions. /5/

Rosalind Franklin

At Cambridge University in the 1950s, Francis Crick and James Watson became famous for the discovery of the structure of deoxyribonucleic acid (DNA). DNA carries the genetic information that is passed from parent to child, but Crick and Watson were not the only people who helped discover its structure.

Born in London, in 1920, Rosalind Franklin studied Chemistry at Cambridge University. After graduating she worked in Paris, and then moved to King's College, London. It was at King's College that she began working on DNA with a scientist called Maurice Wilkins. They used x-ray photographs to study the structure of DNA. Wilkins showed the work of Rosalind Franklin to Crick and Watson and they used it to help

them in their research at Cambridge. In 1953 Crick and Watson published news of their discovery. It was one of the great moments of twentieth-century science.

Rosalind Franklin died in 1958, four years before Crick, Watson and Wilkins received their Nobel Prize for their discovery of the structure of DNA. It was only many years later that people realized the importance of Franklin's work.

Write true or false.

1. DNA carries genetic information from parent to child.
2. Rosalind Franklin received a Nobel Prize for her discovery.
3. In 1953 Crick and Watson published news of their discovery.
4. Rosalind Franklin studied Maths at Cambridge University.
5. The importance of Franklin's work was never realized.
