Pollination

Write numbers to order the stages of pollination.

a) A new plant grows.

b) From the stigma, the pollen travels down the ovary.

c) Here, the pollen fertilises the ovules.

d) Insects and small birds pick up pollen.

e) Some of the pollen sticks to the stigma.

f) The fertilised ovules develop into seeds.

g) They transport it from the stamen to the pistil.

h) When the flower dies, the seeds are spread.
