Ayo, Menyelesaikan Integral Tentu dan Integral Tak Tentu!

Lengkapi titik-titik berikut dengan teliti dan benar.

1. Integral tak tentu

$$\int 2x(x^2 + 3x - 9)dx$$

Jawaban:

$$\begin{aligned}\int 2x(x^2 + 3x - 9)dx &= \int 2x(x^2 + 3x - 9) dx \\ &= \int (2x^3 + 6x^2 - 18x)dx \\ &= \int 2x^3 dx + \int 6x^2 dx - \int \dots dx \\ &= 2 \int x^3 dx + \dots \int x^2 dx - 18 \int x dx \\ &= 2 \times \frac{x^{3+1}}{\dots+1} + 6 \times \frac{x^{2+1}}{\dots+1} - \dots \times \frac{x^{1+1}}{1+1} + C \\ &= 2 \times \frac{\dots}{\dots} + \dots \times \frac{x^3}{\dots} - 18 \times \frac{x^2}{\dots} + C \\ &= \frac{1}{2} \dots + 2x^3 - \dots + C\end{aligned}$$

$$\text{Jadi, } \int 2x(x^2 + 3x - 9)dx = \frac{1}{2}x^4 + 2x^3 - \dots + C.$$

2. Integral tentu bentuk pangkat

$$\int_2^5 (3x - 5)(2x + 4) dx$$

Jawaban:

$$\begin{aligned}\int_2^5 (3x - 5)(2x + 4) dx &= \int_2^5 \dots x^2 + 2x - \dots dx \\ &= \left[6 \times \frac{x^{2+1}}{2+1} + 2 \times \frac{x^{1+1}}{1+1} - \dots \right]_2^5 \\ &= [\dots + x^2 - 20x]_2^5 \\ &= (2 \times \dots + 5^2 - 20 \times \dots) - (2 \times 2^3 + \dots - 20 \times \dots) \\ &= (2 \times \dots + 25 - 100) - (2 \times \dots + 4 - \dots) \\ &= (\dots + 25 - 100) - (\dots + 4 - 40) \\ &= 175 - \dots \\ &= \dots\end{aligned}$$

$$\text{Jadi, hasil dari } \int_2^5 (3x - 5)(2x + 4) dx \text{ adalah } \dots$$
