

A fraction is an equal part of a whole.

$\frac{1}{8}$ means 1 out 8 equal parts.

This means a shape, line or an object has to be broken into 8 equal parts

Which number-line is broken into thirds?

Which number-line is broken in fifths?

Which number-line is broken into quarters?

Match the **pictorial representation** of the fraction to the **number-line** that shows the same fraction.

Write the fraction?

—

Which arrow is pointing to the same fraction on the number-line below?

$$\frac{2}{3} - \frac{1}{3} = \text{—}$$

Write the fraction?

—

Which arrow is pointing to the same fraction on the number-line below?

$$\frac{1}{5} + \frac{2}{5} = \text{—}$$

Write the fraction?

—

Which arrow is pointing to the same fraction on the number-line below?

$$\frac{3}{4} - \frac{1}{4} = \text{—}$$

$$\frac{2}{4} = \frac{\text{—}}{2}$$

Write the fraction?

—

Which arrow is pointing to the same fraction on the number-line below?

$$1\frac{1}{2} + \frac{1}{2} =$$

$$1\frac{1}{2} - \frac{1}{2} =$$

$$1\frac{1}{2} + 1 = \text{—}$$

$$1\frac{1}{2} - 1 = \text{—}$$

What fraction is the arrow pointing to?

Put these fractions onto the number-line:

Only fill in the boxes that show the fractions below.

$\frac{1}{2}$ $\frac{4}{10}$ $\frac{1}{5}$ $\frac{3}{5}$ $\frac{1}{10}$

Mark where $\frac{1}{2}$ is on the number-line. Which letter is closest to $\frac{1}{4}$

Hint $\frac{1}{4}$ is half of $\frac{1}{2}$

Put a X where $\frac{1}{2}$ is located. Which letter is closest to $\frac{1}{4}$

$\frac{1}{2}$		$\frac{2}{2}$	
$\frac{1}{3}$	$\frac{2}{3}$	$\frac{3}{3}$	
$\frac{1}{4}$	$\frac{2}{4}$	$\frac{3}{4}$	$\frac{4}{4}$
$\frac{1}{5}$	$\frac{2}{5}$	$\frac{3}{5}$	$\frac{4}{5}$
$\frac{1}{6}$	$\frac{2}{6}$	$\frac{3}{6}$	$\frac{4}{6}$

$$\frac{1}{2}$$

numerator
denominator

Which fraction is the largest

$\frac{1}{6}$ $\frac{1}{5}$ $\frac{1}{4}$ $\frac{1}{3}$ $\frac{1}{2}$

The larger/smaller the denominator, the larger the fraction.

The larger/smaller the denominator, the smaller the fraction.

Problem

Use the chart above to solve this problem.

James uses $\frac{1}{4}$ of a cup of sugar to make a cake. He then uses $\frac{1}{5}$ of a cup of sugar to make another cake.

Which statement is true?

a/ He uses more than $\frac{1}{2}$ cup of sugar.

b/ He uses $\frac{1}{2}$ cup of sugar.

c/ He uses less than $\frac{1}{2}$ cup of sugar.

Reasoning

$\frac{1}{4} + \frac{1}{4} = \text{ — }$ $\frac{1}{5}$ is than $\frac{1}{4}$

so $\frac{1}{4} + \frac{1}{5}$ must be than $\frac{1}{2}$
