Complete the Venn diagram to classify the technology.

- computers ECG recording studio software
- running machine track exercise bike

Read about technology in films. Then, answer the questions.

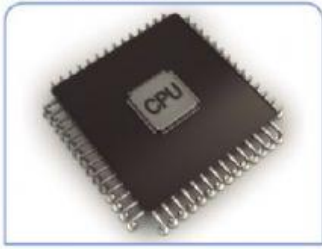

Modern technology has changed the way films are made in many ways. Modern films are made digitally. This means that film cameras can be smaller and lighter. As a result, it is much easier to make a film. In fact, almost anyone can make a good quality film nowadays, using a smartphone or tablet. Computer software is used to edit films and to create special effects. Computer software can also be used to create animations with computer generated characters, objects and backgrounds.

- What makes it easier to make a film nowadays?

- What modern technology can you use to make a film?

- What is computer software used for in film making?

What do the pictures show? Write the name of the objects.
