

Fertilisation

Choose whether the following statements are true or false.

1.	Two male sperm cells fuse together to form a new individual.	
2.	When the penis is inserted in the vagina it is called intercourse.	
3.	Semen, which contains sperm is released in the stomach.	
4.	When semen is released in the vagina it is called ejaculation.	
5.	Sperm swim through the cervix, up the uterus and into the fallopian tube.	
6.	If an egg is present in the fallopian tube, two sperm cells will fuse with the egg cell.	
7.	When an egg cell and sperm cell fuse, it is known as fertilisation.	
8.	The sperm and egg nucleus will fuse together to produce a new individual.	
9.	The fertilised egg cell then starts to divide.	
10.	While dividing, the fertilised egg cell implants itself in the uterus' wall. This is known as implantation.
