

# 7

## Geometry (2)

### Practice 1 Right-angled, Isosceles and Equilateral Triangles

1. Classify the triangles into right-angled, isosceles or equilateral triangles. Write the names of the triangles in the correct group.

| Right-angled<br>Triangles | Isosceles<br>Triangles | Equilateral<br>Triangles |
|---------------------------|------------------------|--------------------------|
| ABC                       |                        |                          |
|                           |                        |                          |
|                           |                        |                          |
|                           |                        |                          |
