

Use the correct words to complete the text.

The human body is like an amazing made up of basic units of life called . Unlike unicellular living things, which are made up of cell, we are made up of millions of cells, so we are living things.

Cells carry out the three basic life processes: Through , they obtain nutrients and energy they need from food. Through , they react to environmental stimuli. Through , they produce new cells that are identical to themselves.

Cells are very so they cannot be seen with the naked eye. We need a to observe them. This is an instrument that makes very small things appear than they really are. So we can see that cells have different sizes and shapes.

For example, cells are elongated, intestine cells are , blood cells are and neurons are larger and -shaped.
