

Characteristics of Living Things Review

A. Directions: Fill in the missing information by labeling each object as living or nonliving and biotic or abiotic. Remember, an object is “biotic” if it is produced by or came from a living thing.

Object	Living or Nonliving?	Biotic or Abiotic?
Flashlight		Abiotic
Monkey		
	Living	
Bird Poop	Nonliving	
Water Temperature		
Virus		Abiotic
Bacteria		
Egg	Nonliving	
Mushroom		Biotic
Grass		
Toe Nail		

B. Directions: Use the information below to label each example as a producer or consumer.

*Producers are organisms that can make their own food. They do this by using chemicals or sunlight in the environment to **produce** food (sugar). Then these organisms do a separate process to change the sugar into energy their cells can use!*

Consumers are organisms that must ingest or eat other living things to get food. They cannot make their own!

Producer **Make**, Consumers **Take**

Organism		Producer or Consumer
Palm Tree		
Butterfly		
Flower		
Bean Sprouts		
Bee		
Human
