

Use the boxes below to guide you through the distribution problems.

1.  $3(x - 4)$

$$= \square \times \square - \square \times \square$$

$$= \square - \square$$

2.  $2(2x + 5)$

$$= \square \times \square + \square \times \square$$

$$= \square + \square$$

3.  $4(3x - 3)$

$$= \square \times \square - \square \times \square$$

$$= \square - \square$$

4.  $6(-2x - 4)$

$$= \square \times \square - \square \times \square$$

$$= \square - \square$$

3.  $-2(3x + 4)$

$$= \square \times \square + \square \times \square$$

$$= \square - \square$$

4.  $-5(-2x + 10)$

$$= \square \times \square + \square \times \square$$

$$= \square - \square$$
