# MATH
Exponents

Exponents tell how many times the base number is multiplied by itself.   Exponents are also called *powers*.

The value of 5^2 is 25. This is because 5 x 5 is 25.

The value of 2^3 is 8. This is because 2 x 2 x 2 =8.

Remember, the exponent tells how many times the base number is multiplied to itself.

When 2 is used as an exponent it can be read as squared. Therefore 4^2 can be read as four squared or four to the power of two.

When three is used as an exponent it can be read as cubed. Therefore 2^3 can be read as two cubed or two to the power of three.

Exponent form is also called *index form*.
