## ANIMAL CELLS AND PLANT CELLS

### 1. Structure of Plant and animal cells:

Tick the correct answer :

| Cell organelles                                                                                                     | Plant cells | Animal cells |
|---------------------------------------------------------------------------------------------------------------------|-------------|--------------|
| <b>1. Cell wall</b><br>            |             |              |
| <b>2. Cell membrane</b><br>       |             |              |
| <b>3. Cytoplasm</b>                                                                                                 |             |              |
| <b>Endoplasmic reticulum</b><br> |             |              |
| <b>Mitochondria</b><br>          |             |              |

| Cell organelles                                                                                            | Plant cells | Animal cells |
|------------------------------------------------------------------------------------------------------------|-------------|--------------|
| <b>Ribosome</b>           |             |              |
| <b>Golgi apparatus</b>   |             |              |
| <b>Chloroplast</b>      |             |              |
| <b>Central Vacuole</b>  |             |              |
| <b>Lysosome</b>         |             |              |

| Cell organelles                                                                                                | Plant cells | Animal cells |
|----------------------------------------------------------------------------------------------------------------|-------------|--------------|
| <b>4. Eukaryotic cell</b><br> |             |              |

## 2. Compare Animal cells with Plant cells.

*Fill in the blank with the words given:*

Compare Animal Cells with Plant Cells which we can see:

- Similarity: Both Animal Cells and Plant Cells are.....
- Differences:

Plant Cells include:

..... in the center

..... has the function of photosynthesis to synthesize nutrients for Plants so Plants are .....

..... with shaping function

Animal Cells include:

..... Function as the digestive system of the cell

Animals are.....
