In the game of volleyball, players hit a ball over a long net that stretches across a court. There are twelve players on the court at one time—six players per team. The game of tennis is similar to volleyball in that a ball is hit over a long net on a court, but this is all the two sports have in common. In tennis, the ball is hit with a racquet, and only two or four players are on the court at one time.

Why?

Are you a musician? Would you like to connect with other music makers? You've got choices when it comes to musical programs at Morton University. If you join the marching band, you'll play in front of thousands at our football games. If you join the jazz band, you'll play at our dances and elite alumni events. Each of these programs can help you become a better musician. The jazz band is a little smaller than the marching band but there is more room for improvisation. Of course if you join the marching band, you'll get to wear a cool cape. The choice is yours.

Freezer burn may have wasted more ice-cream than sidewalks. If you don't know, freezer burn is when ice crystals form on the surface of ice-cream. These ice crystals can ruin the texture and flavor of the ice cream. But you can prevent freezer burn. Since freezer burn is caused when melted ice-cream is refrozen, rather than eating your ice-cream from the container as it melts, scoop your ice-cream into a bowl and put the container back in the fridge immediately. Doing this ought to help you solve your issues with freezer burn.

Why?

No one knows the true origin of ice-cream, but the first published ice-cream recipe appears in "Mrs. Mary Eales's Receipts," a cook book that was printed in London in 1718. Sometime around 1832, an African American confectioner named Augustus Jackson created multiple ice cream recipes and invented a superior technique to manufacture ice cream. Ice cream soda was invented around 1874, but the real breakthrough may have been at the 1904 World's Fair in St. Louis, Missouri, when the American ice-cream cone was unveiled!
