Google is working on a new project. It will combine Maps features and restaurants and bars located around the city with photos and review from users. Most of their target users use mobile phones and live in cities with a stable internet connection. Needless to say, budget is not a problem as this app was granted 1000 dollars to be first launched in a beta version, to then be released on a freemium version. Beta version will extend at about six months to allow developers fixing any bugs.

Meta is experimenting with AR site. This app will need a really good connection and will use the camera to indicate users where to go. First trials on computer did not work properly, however, it is expected to be used in laptops, phones and tablets. Rumour has it Tik Tok developers are working on a similar app, so deadlines to develop has been changed to launched it first.

Colombian Technology ministry is remaking their teacher's support website. It is known from past experiences that a lot of the users are teachers and students. Teachers mostly use it from their computers while students visit the website through their parent's devices. Population is spread around the country so there are places where the connection is low or non-existent. Deadline is 15th January 2023 as it is aimed to be available for teachers one week before starting academic year.

A hotel wants to renew their site. Their audience target varies from families, business people, to backpackers. They want to guarantee access to all of them from any device. Budget is moderate; however, deadline is really tight as they would like to be ready for holidays season.

Small, new company is looking to enter e-commerce business. They know most of their possible users prefer to make their purchases from home. They do not need anything fancy, they are looking for a reliable, affordable solution.
