

Social Science		The Earth, Maps and Globes Test	
Name:			
Number:	Class:	Date:	

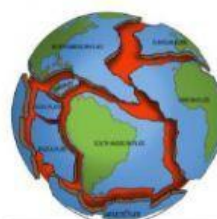

Write the missing words (use the word bank)

The Earth is divided
into four main

The Earth's crust is composed of

The crust of the Earth is broken into many pieces
called

When tectonic plates meet, they push against each other
causing earthquakes,, volcanic eruptions or

The is the largest layer of the Earth. It is the layer
below the It is composed of called magma.

When the mantle pushes through the crusterupt.

Theis in the centre of the Earth. It is divided into two different zones:
the and the

The is composed of liquid iron and nickel

The is composed mainly of solid iron

Word bank:

tsunamis
solid rocks
layers
inner core
mountains
mantle
crust
outer core
tectonic plates
semi-molten rocks
volcanoes
core

Why is the Inner Core of the Earth solid if it is the hottest layer?

.....

Choose the correct answer:

For spherical 3D depictions of the Earth, we use

To see mountains, rivers, lakes... we look at maps.

A map shows man-made features such as cities, countries, borders...

..... maps show highways, roads and points of interest like airports or hotels.

..... maps show information about the temperature or the amount of precipitation.

We can makemaps to represent things like population, factories, animals... of an area.

Choose the correct answer and match the pictures:

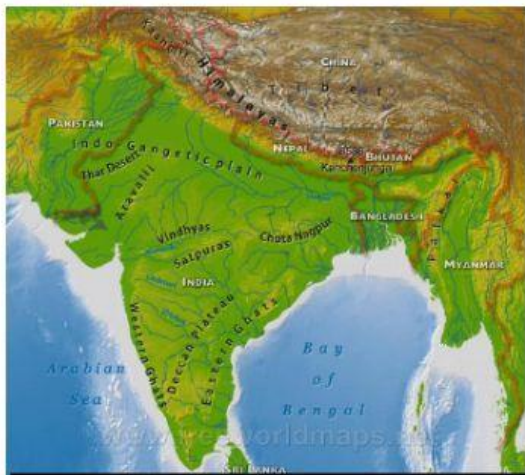

Some maps have a to explain the information shown on the map.

Some maps have a to show the real distance between places.

Some maps have a to show where the North, the South, The East and the West are.

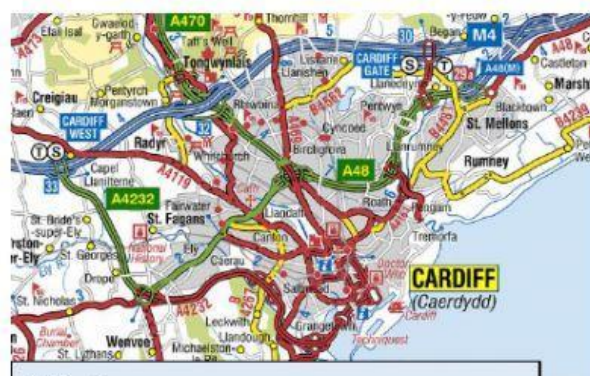

What type of maps are these?
