Parts of a Plant

Created for you: Bethany Marlowe

3. Complete the definitions.

- The ...is the part of the flower that covers the petals at the bud stage.
- The ... is the colorful part of the outside of the flower which attracts insects.
- is a fine powder that comes from the anther.
- The.... is the male organ of a flower.
- The ... is the female organ which contains the stigma, style and ovary.

4. Read the text and order the pictures from 1 to 4.

How do flowering plants reproduce?

First, an insect takes pollen from a stamen to a pistil. Then, inside the pistil, the pollen joins an ovule to make a seed. Next, the petals fall off the flower and the pistil grows around the seed into a fruit. Finally, the fruit falls on the ground and the seed grows into a new plant.

5. What kind of plants are they?

Grass	Trees	Bush
-------	-------	------
