Read the following passage and mark the letter A, B, C, or D to indicate the answer to each of the question.

Vietnam's population is ageing quickly. In 2017, more than 10 per cent of the population will be 60 and older, and in 15-20 years the elderly will account for one third of the total population. This raises concerns about healthcare, welfare and pensions for the elderly at a time when Vietnam is focusing on economic integration and requires a large labor force. So far two solutions have been proposed: to loosen the two-child policy and to increase the retirement age to 58 for women and 62 for men. By ending the two-child policy the government expects to make up for the ageing population within the next 20 years. But **its** effect could be creating an uncontrollable boom in the Vietnamese population. When the government loosened the two-child policy in 2015 in a trial period, in the first 6 months of 2016 the third child birth rate increased remarkably by 7.5 per cent

Raising the retirement age has been proposed by the Ministry of Labor pending parliamentary evaluation in May 2017. While the policy is beneficial in utilizing the work experience of the elderly while creating savings in the pension budget, it also means fewer job prospects and promotion opportunities for younger generations. It is also not in the interest of all the elderly, especially the 70 per cent of Vietnam's labor force working in manual labor-intensive sectors such as agriculture, manufacturing and construction where working above the age of 50 can be dangerous and unproductive. Despite these drawbacks, raising the retirement age is still considered by policymakers as one of the key solutions to the ageing population problem in Vietnam. However, these are only **temporary** solutions.

Question 39. The best title for this passage could be _____.

- A. Vietnam struggling with ageing population B. Stopping the two-child policy in Vietnam
C. Raising the retirement age in Vietnam D. How to solve the aging population in Vietnam

Question 40. Which statement is probably TRUE according to the information in the paragraph 1?

- A. In 2017, the elderly take up for one third of the total population, this leads to more concerns about healthcare, welfare and pensions for the elderly.
B. In 2015, the two-child policy has been officially tightened and succeeded.
C. The government would promote families to have two children to compensate for the ageing population within the next 20 years.
D. In the next 15-17 years, Vietnam's economy will need a large labor force to integrate with global economy.

Question 41. The word "**its**" in paragraph 1 refers to _____?

- A. two-Child policy B. aging population C. retirement age D. economic integration

Question 42. In the 2nd paragraph, the writer suggests that _____.

- A. The Ministry of Labor has applied raising the retirement age in May 2017.
B. Raising the retirement age can reduce job opportunities for younger generations.
C. The elderly whose age is 50 would be dangerous if they continued to work
D. Raising the retirement age and stopping two-child policy can be considered as long-term and effective solutions.

Question 43. The word "**temporary**" in paragraph 2 means _____.

- A. constant B. permanent C. short-term D. long-term

Read the following passage and mark the letter A, B, C, or D to indicate the answer to each of the question.

Coral reefs are some of the most diverse ecosystems in the world, housing tens of thousands of marine species. With their hardened surfaces, corals are sometimes mistaken as being rocks. And, because they are attached, “taking root” to the seafloor, they are often mistaken for plants. However, unlike rocks, corals are alive. And unlike plants, corals do not make their own food. Corals are in fact animals. Appearing as **solitary** forms in the fossil record more than 400 million years ago, corals are extremely ancient animals that evolved into modern reef-building forms over the last 25 million years.

Coral reefs are the largest structures on earth of biological origin. Coral reefs are unique and complex systems. **Rivaling** old growth forests in longevity of their ecological communities, well-developed reefs reflect thousands of years of history.

Corals are ancient animals related to jellyfish and anemones. The branch or mound that we often call “a coral” is actually made up of thousands of tiny animals called polyps. A coral polyp is an invertebrate that can be no bigger than a pinhead to up to 30 centimeters (1 foot) in diameter. The polyps extend their tentacles at night to sting and ingest tiny organisms called plankton and other small creatures. Each polyp has a saclike body and a mouth that is encircled by stinging tentacles. The polyp uses calcium carbonate (limestone) from seawater to build a hard, cup-shaped skeleton. This skeleton protects the soft, delicate body of the polyp.

Reefs only occur in shallow areas that are reachable by sunlight because of the relationship between coral and algae. Various types of microscopic algae, known as Symbiodinium, live inside of the coral, providing them with food and helping them to grow faster.

There are over 2,500 kinds (species) of corals. About 1,000 are the hard corals that build coral reefs. Other corals are soft corals. Soft corals have skeletons that are flexible and can bend with the water. The three main types of coral reefs are fringing reefs, barrier reefs, and coral atolls. The most common type of reef is the fringing reef. This type of reef grows seaward directly from the shore. **They** form borders along the shoreline and surrounding islands. When a fringing reef continues to grow upward from a volcanic island that has sunk entirely below sea level, an atoll is formed. Atolls are usually circular or oval in shape, with an open lagoon in the center. Any reef that is called a barrier reef gets its name because its presence protects the shallow waters along the shore from the open sea. That protection promotes the survival of many types of sea plant and animal life.

Question 44. Which of the following could best reflect the main purpose of the author in the passage?

- A. To prove that coral reefs are animals.
- B. To provide the facts about coral reefs.
- C. To explain that coral reefs are the most diverse ecosystems in the ocean.
- D. To distinguish coral reefs with other animals.

Question 45. The word “**solitary**” in paragraph 1 could be best replaced by _____.

- A. single
- B. private
- C. general
- D. typical

Question 46. The word “**Rivaling**” in paragraph 2 is closest in meaning to _____.

- A. Differing from
- B. Comparing with
- C. Relating to
- D. Changing from

Question 47. According to the passage, the following are true about coral reefs, EXCEPT _____.

- A. Coral reefs are mistaken for rocks and plants because of their hardened surface and “roots”.
- B. Polyps are the composition of corals.
- C. The skeleton of a polyp is created from calcium carbonate in seawater.
- D. Corals absorb food in the sunlight using their tentacles.

Question 48. With the help of myriad species of tiny algae, reefs _____.

- A. are likely to develop more rapidly.
- B. can protect the soft and delicate body of the polyp.

C. are able to find food inside their polyps.

D. find it easier to bend with the water.

Question 49. What does the word “**They**” in paragraph 5 refer to?

A. coral atolls

B. barrier reefs

C. fringing reefs

D. the shores

Question 50. As mentioned in the last paragraph, why a reef is called a barrier reef?

A. As it keeps developing from a volcanic island that has sunk entirely below sea level.

B. Because its skeleton is flexible enough to defend many marine organisms.

C. Since it saves the low waters along the coastline from the open sea.

D. Because it is one kind of 1,000 hard corals that protect the shoreline.
