UNIT 3. REPRODUCTION
FEMALE REPRODUCTIVE SYSTEM AND PUBERTY

1. Match the female reproductive organs to the descriptions.

fallopian tubes	●	The part of the uterus that leads to the vagina.
uterus	●	Female sex cells, called ova or eggs, are produced here.
cervix	●	This has muscular walls where an embryo/foetus will develop.
vagina	●	Connect the ovaries to the uterus.
ovaries	●	A long canal leading to the outside of the female body.

2. Label the diagram of the female reproductive system.

uterus fallopian tubes ovaries vagina cervix

3. Choose the right option.

When a girl reaches puberty, the begins.

About once every 21 days, an egg matures and leaves the ovary. This is called .

The egg travels down the fallopian tube. The wall thickens with extra blood and tissue.

If an egg does not meet a sperm cell, it leaves the body and the uterus wall breaks down. This is called . It usually lasts from three to seven .

LIVEWORKSHEETS

4. Classify the developments from puberty.
