LANGUAGE LEARNING IN THE UNITED STATES

Most people in the United States speak only one language: English. They do not learn to speak a second language. High schools teach languages. But very few students learn to speak well. Why don't Americans speak other languages?

First, most Americans never travel to other countries. The United States is a very large country. Americans can travel a long distance and not leave the United States. They do not need to learn a second language.

Second, one of the countries next to the United States is Canada. Most people in Canada speak English. Some Americans live near Canada. They travel there often. But they do not have to learn a new language.

Third, many people in other parts of the world speak English. If Americans travel to other countries, they can speak English there, too.

Some Americans think that it is a mistake to speak only English. They believe it is very important to learn a second language. Maybe someday other Americans will agree. Then more people will speak a second language in the United States.

BODIES ON ICE

In very cold parts of the world, scientists study the past. They find animals frozen in the ice. The animals look alive, but they are not. They were frozen many years ago.

Russian scientists found a large animal called a mastodon in the ice. It looked like an elephant. But it was larger, and it had lots of hair. In fact, the elephant is the mastodon's younger cousin.

In 1984, American scientists were working near the North Pole. They found the body of a man frozen in the ice. This man went to the North Pole in 1846. He died, and his friends buried him in the ice. Today, his body looks the same. It did not change at all in the ice.

These facts interest doctors. They have some patients who are very sick. No one can help these patients. But some day there may be a new medicine for them. These doctors want to save people for the future. Maybe patients can be frozen until there is medicine to help them.
