UNIT 4. MIXTURES
TYPES OF MIXTURES AND MAGNETISM

1. Choose the correct options.

A [_____ ▼] mixture has a uniform appearance.

A [_____ ▼] mixture has visibly different components or states.

The components in a [_____ ▼] mixture are arranged in a similar way throughout.

[_____ ▼] mixtures are often made up of the same type of molecules or compounds.

An example of a [_____ ▼] mixture is oil and vinegar.

Alloys are examples of [_____ ▼] mixtures.

2. Complete the text about separating mixtures.

We can use magnetism to separate _____ in a mixture that display magnetic and non-magnetic _____ .

Some metals, like iron and nickel, have _____ properties. Other metals, such as gold, silver and aluminium, do not. We can use the attraction _____ of a magnet to separate the magnetic components from the _____ ones.
