

Name: _____
Subject: Math

Grade "6" Section: _____
Date: _____

1) Fill in the blanks with the correct answer from the table below.

Incenter	Centroid	Orthocenter	Circumcenter	Angular bisector	Perpendicular bisector	Median	Height
----------	----------	-------------	--------------	------------------	------------------------	--------	--------

- A _____ is the intersection point of perpendicular bisectors of the sides of a particular triangle
- A _____ is a line segment that joins a vertex of the triangle to the midpoint of the opposite side
- The intersection point of angular bisectors in a triangle is called _____.
- The intersection point of medians in a triangle is called _____.
- A _____ is the perpendicular drawn from the vertex of the triangle to the opposite side.
- We can draw a circle circumscribed around a triangle by finding its _____.

2) Answer by true or false.

- An angular bisector divides a given side into 2 equal parts. _____
- A perpendicular bisector is a line that divides a segment into 2 equal parts and makes a 90 degrees with the line it bisects. _____
- The point of intersection of heights in a triangle is called incenter. _____
